Email: SRINIWAS AWASTHI Gmail	Phone: +91 84312 13580
Location: India	Focus: AI agents, coding, science, modern technologies

Professional Summary

Engineering student with a strong academic record (CGPA 7.8/10) and a deep interest in mathematics, physics, science, modern technologies, and AI agents. Built multiple AI-assisted mini projects using AI agents, showing practical problem solving, quick learning, and a hands-on approach to software development.

Education

- **Undergraduate Engineering** - Current
- **CGPA: 7.8/10**
- Strong performance and interest in Mathematics and Physics

Technical Strengths

- AI-assisted development and building with AI agents
- Coding fundamentals and project implementation
- Problem solving, logical thinking, and debugging
- Mathematics and Physics-based analytical ability
- Software project presentation, documentation, and learning fast
- GitHub-based project organization and version tracking

Academic Achievements

- Maintained a CGPA of 7.8/10 in undergraduate engineering studies.
- Developed and completed multiple AI-assisted engineering mini projects.
- Strengthened practical understanding of technology through hands-on project work.

Non-Academic Achievements

- 2nd Place - Techno Maze Competition
- 3rd Place - Mini Hackathon

Project Portfolio

All projects below were developed as AI-assisted builds using AI agents, with an emphasis on practical learning, iteration, and implementation.

THINKR_AI

- AI concept project focused on intelligent interaction, experimentation, and modern workflow ideas.

Book Matrix Library Management System

- Library management solution for organizing books, records, and operations in a structured way.

FocusFlow

- Productivity-focused project designed to support attention, planning, and workflow management.

Stellar Assault - Space Shooter

- Game project that demonstrates creativity, logic, and interactive development.

CalcAll - Universal Calculator Platform

- Multi-purpose calculator application built for different calculation needs in one place.

Engineering Student Assistant

- Student-support project aimed at helping with academic tasks and engineering workflow.

AI Agents for Hackathons

- A project concept that explores AI agent workflows for rapid idea generation and hackathon support.

Interests and Learning Goals

- Science and modern technology exploration
- Artificial intelligence and AI agents
- Coding, systems, and software building
- Continuously improving technical skills through practice
